

Mutual Fund Analytics – Day 1 Report

Name: Sai Sandeep Gedela

Project: Mutual Fund Analytics

Task: Day 1 – Project Setup & Data Ingestion (ETL)

Objectives Completed

1. Project Setup

Created project folders, initialized Git repository, and connected GitHub repository.

2. Dependency Installation

Installed pandas, numpy, matplotlib, seaborn, plotly, sqlalchemy, requests, scipy, and jupyter. Generated requirements.txt.

3. Dataset Loading

Loaded all 10 CSV datasets and verified shape, data types, and sample records.

4. Exploratory Analysis

Identified 10 fund houses, 2 categories, 12 sub-categories, and 5 risk categories.

5. Live NAV Data Collection

Fetches and stores NAV data for HDFC Top 100, SBI Bluechip, ICICI Bluechip, Nippon Large Cap, Axis Bluechip, and Kotak Bluechip.

6. Data Quality Validation

Validated AMFI codes between fund_master and nav_history datasets. All 40 codes matched successfully with zero missing codes.

Conclusion

Day 1 objectives were successfully completed. The project environment, data ingestion pipeline, API integration, and validation checks are ready for further analysis.
