

Day 2 Report – Data Cleaning & SQLite Database Design

Name: Sai Sandeep Gedela

Project: Mutual Fund Analytics – Bluestock Fintech Internship

Date: 24 June 2026

Objective

The objective of Day 2 was to perform data cleaning and validation on multiple mutual fund datasets, design a SQLite database schema, load cleaned datasets into the database, create analytical SQL queries, and document the data model for future analysis.

Tasks Completed

1. Data Cleaning and Validation of 10 datasets.
2. SQLite Star Schema Design.
3. Database Loading using Pandas and SQLAlchemy.
4. Creation of Analytical SQL Queries.
5. Preparation of Documentation and Data Dictionary.

Deliverables Generated

10 cleaned CSV files, bluestock_mf.db, schema.sql, queries.sql, and data_dictionary.md.

Conclusion

Day 2 focused on preparing high-quality analytical datasets and establishing a structured database environment for mutual fund analysis.
